

## SIGN-PRO APP

Sign-Pro is an iOS App for programming Alpha and Betabrite signs with an iPhone, iPad, or iPod.

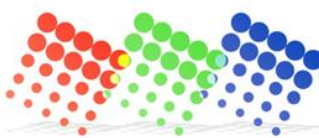

Use Sign-Pro to compose, preview, and send messages to your Alpha or Betabrite sign.

Dictate and type messages using Sign-Pro Editor. Easily insert travel modes, fonts, colors, built-in animations, time, date, and other eye-catching features into your messages.

Preview your messages with Sign-Pro Simulator to see how your messages will display on your sign. Sign-Pro Simulator is especially helpful when your sign is located where you can't see your message after you send it.

Sign-Pro stores 100 messages for reuse as templates for creating new messages. Sign-Pro messages can be transferred to other iOS devices for use with Sign-Pro on those devices.

Customize your Sign-Pro Settings and your Default Message to make sign messaging personal, quick, easy, and fun.

**Sign-Pro**

Sign-Pro uses the WiFi or LTE Cellular wireless features of your iPhone, iPad, or iPod to send messages to your sign if your sign is connected to a Local Area Network.

Sign-Pro uses the Bluetooth® 4.0 LE wireless feature of your iPhone, iPad, or iPod to send messages to your sign if your sign has an Alpha BLE Wireless Adapter connected to its RS232 Serial Port.

Detailed instructions for using Sign-Pro to compose, format, send, save, and share messages may be found at [sign-pro.us](http://sign-pro.us). A list of Alpha and Betabrite signs that are compatible with Sign-Pro may be found at <https://sign-pro.us/compatible-signs/>.

Supported iOS Devices	
<ul style="list-style-type: none"><li>• iPhone (models 4S and later)</li><li>• iPod Touch (5th and 6th generation)</li><li>• iPad 3 with High-Density Display</li><li>• iPad 4 with Retina Display</li><li>• iPad Air (all models)</li><li>• iPad Mini (all models)</li><li>• iPad Pro (all models)</li></ul>

### **How does Sign-Pro send messages from my iPhone to an Alpha or Betabrite sign?**

Sign-Pro uses the WiFi, LTE Cellular, or Bluetooth® 4.0 LE wireless features of your iPhone/iPad/iPod to send messages to your sign.

### **Will Sign-Pro send messages to more than one sign at a time?**

No. Sign-Pro connects to one sign at a time.

### **Is Sign-Pro compatible with my Android device?**

No. Sign-Pro is an iOS App for the Phone, iPad, and iPod. It does not run on Android devices.

### **Will Sign-Pro send messages to signs made by another manufacturer?**

No. Each sign manufacturer uses unique software instructions to program and control its signs. Sign-Pro is designed specifically for programming Alpha and Betabrite signs that use Alpha Sign Communications Protocol, which are instructions exclusive to signs manufactured by Adaptive Micro Systems.

### **Will Sign-Pro run on any iPhone, iPad, or iPod?**

Sign-Pro runs on devices using iOS 8 or later. See Supported Devices on page 2 of this brochure.

### **What signs will Sign-Pro program?**

Sign-Pro will program most of the Alpha and Betabrite indoor and outdoor signs produced by Adaptive Micro Systems over the past 30 years. For a list of signs that can be programmed using Sign-Pro, visit <https://sign-pro.us/compatible-signs/>. If your Alpha or Betabrite sign is not on this list, visit [Contact Us](#) and send a message listing your sign model.

### **Is there a Sign-Pro Manual?**

The [Sign-Pro](#) website has detailed instructions for using Sign-Pro. It explains how to acquire and set up the Alpha BLE Wireless Adapter and the Alpha Ethernet Adapter. It has a list of every formatting feature in Sign-Pro with animated illustrations for single-line and multiple-line signs. It has detailed instructions for formatting Alpha and Betabrite messages. It has lists of signs that are compatible with Sign-Pro. It has instructions for setting up older Alpha signs for use with Sign-Pro, and much more.
